

# Corporate Design

Ilyas Benyamna, Ujjwal Khadka, Saad Aboujid, Idriss Chendid

To access the CLAMV online wesbite, use: <http://clabsql.clamv.jacobs-university.de/~ibenyamna/index.html>.

## Landing Page

For the main page, we want to display all of ongoing projects, later on we will add the option to search for and filter projects. As of now we simply display a list of the projects. As an example, we put two projects on the landing page called Project 1 and Project 2. For showcase purposes, we only made a custom page for Project 1.

## Navigation Bar

We made the decision to put the navbar on the left side, later on we will make it so that the navbar is retractable, meaning that the user can choose to hide it and invoke it whenever needed. The navbar contains hyperlinks to all the pages that we created including the imprint page which as required by the instructions is accessible through one click via its respective hyperlink on the navbar.

## Project Page

For this homework, we only made the tasks for Project 1. We also included the possibility to switch between projects by choosing from the drop down form but it currently doesn't work. When it comes to the tasks, we chose to a Kanban type of approach, meaning that we will have many containers in which we can put task. We have a scheduled tasks container, a current tasks container and a finished tasks container. Later on, the user would be able to drag and drop tasks from one container to the next. Currently the task boxes simply show the title of the task along with the deadline on the bottom.

## Imprint Page

Contains the emails of the group members along with the notice.
